

Zach Smoak

Engineering & Product Leader | Director-Level | Agile at Scale | Leader of Leaders

516-521-7344 • zsmoak@gmail.com • linkedin.com/in/zachsmoak • Philadelphia, PA

SUMMARY

Engineering and product leader with nearly 20 years in software and 10+ years managing enterprise-scale teams. Known for building high-functioning cultures that others benchmark against, whether from scratch, inherited, or ready for the next level. Grows engineers into project leads and leads into managers, deliberately and repeatably. Track record spanning revenue-driving product launches, high-availability platforms, and complex partner relationships. AI and agentic workflows are embedded in how I lead and how my teams work.

EXPERIENCE

Manager, Software Development & Engineering

03/2025 – Present [Comcast](#)

- Own and coordinate the enterprise-scale vendor relationship between Comcast and independent keying provider Intertrust, managing millions of ASN device records ingested across systems
- Directed device bring-up for 2 launched Xumo Smart TV devices and SoCs; overseeing onboarding for 6 additional devices across an 18-month integration lifecycle
- Organized delivery of provisioning profiles across two environments and three separate AWS regions, enabling global scale and high availability for device identity services
- Onboarded and developed two junior engineers into project contributors within their first year, documenting their impact and advocating for both to be promoted to ENG2, achieved in under 12 months
- Embedded AI tooling across team workflows, including code review, code generation in Python and Node for internal administrative and metrics tooling, technical documentation, and roadmap organization

Engineering Manager

11/2021 – 03/2025 [Vivid Seats](#)

Tech Stacks: React/Node/Java/Python | Responsible for: 10+ engineers

- Led a rapidly growing \$1B+ B2B partnerships portfolio, driving 28% YoY growth through strategic technical delivery and cross-functional stakeholder alignment
- Championed development of a novel product that drove ~40% increase in customer conversion, owning the initiative from concept through launch
- Technology lead for a major CapitalOne partnership, providing an integral SaaS solution that generated \$13M+ in first-year sales through close collaboration across engineering, product, and business teams
- Developed multiple senior engineers into autonomous project leads and coaching them through full scrum ownership, advocating for and securing their promotions, and expanding their scope into adjacent technical domains
- Established a structured talent pipeline through university internship programs at Drexel University and University of Waterloo, building a repeatable framework for early-career engineering development
- Founding Executive Sponsor of VividPride, the company's LGBTQ+ Employee Resource Group

Sr. Manager, Process & Tools

03/2020 – 11/2021 [Comcast](#)

Tech Stacks: Javascript/Jira | Responsible for: 6+ departments

- Directed agile transformation across six front and backend engineering teams, standardizing practices across the full business unit
- Established holistic strategic product release and communication plans for two reporting structures
- Played a leading role in cross-functional alignment across 5 different data sectors, including Data Onboarding, APIs, Data Visualization, & Data/Product Analytics
- Created onboarding model for external clients new to Comcast
- Portfolio and Project Management lead for partners including Cox and Sky Italia

Sr. Manager, eXperience Product Engineering

03/2019 – 03/2020 [Comcast](#)

Tech Stacks: Angular/Node/Java/AWS/iOS | Responsible for: 15+ engineers

- Grew lead mobile engineer into an engineering manager, delegating full ownership of mobile development while maintaining strategic oversight of the broader platform; a deliberate succession move that increased team throughput and leadership depth

- Directed the API backbone of Timeline applications, maintaining six 9s of availability for 35k+ users across web and mobile
- Managed over 1 million API interactions per month across a high-availability, enterprise-scale infrastructure
- Scaled iOS development team and directed construction of all build pipelines for Xfinity Assistant, supporting multiple applications with 1M+ App Store downloads
- Directed implementation of a GraphQL model, increasing API lookup speeds 10x and driving measurable gains in productivity and user satisfaction

eXperience Engineering Manager

02/2018 – 03/2019 *Comcast*

Tech Stacks: Angular/Node/Java/AWS/iOS | Responsible for: 10+ engineers

- Established a structured mentorship pipeline where senior engineers held direct weekly 1-on-1s with junior engineers; deliberately building coaching capacity into the team and creating a culture of internal development
- Led the launch of Timeline 2.0, directing adoption of best-in-class design and software standards across a cross-functional engineering team
- Architected Elements, a self-service data ingestion and management tool aggregating 100+ real-time interactions into Timeline
- Directed the national rollout of the native Timeline iOS app for 10,000+ field technicians while owning all aspects from architecture and SDLC through beta testing, field research, and deployment

Scrum Master

11/2016 – 02/2018 *Comcast*

Tech Stacks: AngularJS/GoogleSheets/Javascript/Tableau/Jira | Responsible for: 6+ engineers

- Retail development leader for the brand launch of Xfinity Mobile, facilitating a team of 6 engineers building a custom AngularJS sales application for retail affiliates
- Aggregated delivery metrics across 10+ development teams, providing leadership with a comprehensive real-time view of resourcing bandwidth and delivery schedules

Technical Lead, Web Development

07/2015 – 10/2016 *NRG Energy*

Tech Stacks: PHP/HTML/CSS/Javascript/MySQL | Responsible for: 6+ engineers

- Trusted technical partner across business, project management, and engineering teams, successfully leading a complex integration between homegrown web systems and a large SAP installation

Software Engineer

04/2011 – 07/2015 *NRG Energy*

Tech Stacks: PHP/HTML/CSS/Javascript/MySQL | Responsible for: 3+ engineers

- Developed customer-facing and telemarketing enrollment applications using LAMP technologies; promoted to Technical Lead after four years of expanding scope and ownership

EDUCATION

Master of Science, Software Engineering – Drexel University

Bachelor of Science, Computer Information Systems – Rider University

SKILLS

Engineering Leadership • Product Strategy • People Development • Coaching & Mentoring • Cross-functional Leadership • Agile at Scale • API Architecture • GraphQL • AI/LLM Integration • Agentic Workflows • React/Node/TypeScript • AWS • CI/CD • Web performance • SLOs/SLAs • B2B SaaS • Stakeholder Management • Product Roadmap
